UniHub Skills and Career Week 2026

Workshop: AI & Machine Learning Career Bootcamp: Production LLMs

Organized by: AI Research Center & Tech Innovation Hub

Objectives:

- Demystify Large Language Models, prompt engineering, and context window economics.
- Build Retrieval-Augmented Generation (RAG) pipelines using vector embeddings.
- Explore real-world integrations with Google Gemini Flash and OpenAI APIs.
- Understand model guardrails, safety filtering, and latency optimization.

Target Audience:

- Students passionate about Artificial Intelligence, NLP, and Machine Learning.
- Software developers looking to integrate generative AI into existing products.

Key Highlights & Agenda:

09:00 - 10:30 | Foundational LLMs & System Prompt Design Patterns
10:45 - 12:00 | Embeddings, Semantic Search & Vector Databases (PostgreSQL pgvector)
13:30 - 15:00 | Lab: Building an End-to-End University Q&A Assistant
15:15 - 16:30 | Evaluation, Hallucination Mitigation & Industry Career Pathways

Prerequisites & Speaker Info:

- Python 3.10+ installed with jupyter notebook, requests, and numpy.
- Personal Google AI Studio API key.
- Speaker: Dr. Le Quang D - Lead AI Researcher at Viettel AI / Former Google Fellow.
