UniHub Skills and Career Week 2026

Workshop: Hands-on Docker & Kubernetes for Modern Cloud Applications

Organized by: Faculty of Information Technology & Google Developer Student Club

Objectives:

- Master container fundamentals, images, layers, and the Docker runtime engine.
- Learn best practices for multi-stage Dockerfiles and container security.
- Understand Kubernetes core primitives: Pods, ReplicaSets, Deployments, and Services.
- Deploy and debug microservices architectures in a local Kubernetes cluster.

Target Audience:

- 3rd and 4th-year Computer Science and Software Engineering undergraduates.
- Junior backend developers, DevOps engineers, and Cloud enthusiasts.
- Students preparing for cloud engineering and site reliability roles.

Key Highlights & Detailed Agenda:

08:30 - 09:30 | Session 1: Container Architecture & Dockerfile Optimization
09:30 - 10:30 | Session 2: Orchestration with Docker Compose & Networking
10:45 - 12:00 | Session 3: Introduction to Kubernetes Architecture & Control Plane
13:30 - 15:00 | Session 4: Hands-on Lab: Deploying Microservices on K8s
15:15 - 16:30 | Session 5: Ingress, ConfigMaps, Secrets, Monitoring & Prometheus

Prerequisites & Speaker Information:

- Laptop with at least 8GB RAM and Docker Desktop / Minikube installed.
- Basic Linux command line knowledge (bash/zsh) and Git fundamentals.
- Speaker: Mr. Nguyen Van A - Principal Cloud Architect at TechCorp Vietnam (CNCF Ambassador).
- Co-speaker: Ms. Tran Thi C - Senior DevOps Lead with 8+ years AWS/GCP experience.
